[Nokia Interim Report For Q1 2015 – Good Performance By HERE And Nokia Technologies. Nokia Networks Sales Up](#)

The new business groups are:

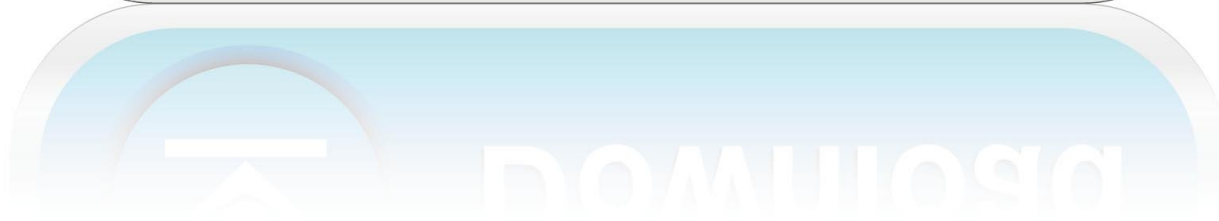

- **Mobile Networks**, which will include radio access network and microwave radio link products, related network management, network planning and optimization, deployment and technical support services. This business group will offer the full portfolio for customers wanting to buy mobile access networks. It will target leadership in key technologies such as 5G, O-RAN and vRAN. Tommi Jitto was appointed as President of this business group.
- **Network Infrastructure**, which will include IP Routing, Optical Networks and Fixed Networks, as well as Alcatel Submarine Networks business, currently reported under Group Common and Other. This business group will respond to the ever-increasing demand for higher capacity, greater reliability, faster speeds and lower costs. Federico Guillén was appointed as President of this business group.
- **Cloud and Network Services**, which will include the existing Nokia Software business (excluding Mobile Networks network management), Nokia's enterprise solutions, core network solutions including both voice and packet core, and managed and advanced services from its current Global Services unit. This unit will also act as a Go-to-Market and delivery channel for products from other business groups to enterprise customers. Cloud and Network Services will target growth by leveraging the industry transition to cloud-based delivery, network-as-a-service business models, and software- and services-led value creation. Raghav Sahgal was appointed as President of this business group.
- **Nokia Technologies**, which will remain largely unchanged. Jenni Lukander continues as President of this business group.

Phase 2: mid-point update on strategy and operating model

On December 16, 2020, Nokia provided a mid-point update on its strategy and operating model. We announced that Nokia was aligning itself to deliver critical networks to Communication Service Providers (CSPs), enterprises and webscales.

We synthesized our strategy analysis into six strategic beliefs:

1. Networks are playing an increasingly important role in society. This is allowing us to extend our focus to serving critical networks beyond CSPs.
2. Critical networks are built based on a best-of-breed approach with network elements selected on a best performance per Total Cost of Ownership (TCO) basis.
3. Technology leadership underpins momentum and financial returns in critical networks.
4. Establishing technology leadership in some segments requires us to anticipate, shape and invest in the next technology window – where there is no path, we will reassess segment participation.
5. Gradually, value in critical networks is migrating away from monolithic systems towards silicon, software and service, and will be captured through different business models.
6. Sustained investment in long-term innovation provides us with a platform to take the long view.
